Actium is a contemporary multilingual sans serif typeface developed for office environments and magazines. Though Actium looks elegant displayed large, it also works particularly well printed in small sizes. The design has an unusual diagonal contrast – much more common in a serified face than in a sans serif – giving it more bite.

Actium's italic is more dynamic than its roman. Although its main purpose is to emphasize small sections in regular texts, it still allows reading in longer passages. Also, the italic was designed to automatically avoid letters clashing into their neighbours by replacing these combinations with alternates or ligatures. Amongst a range of standard

OpenType features, Actium comes with a special feature, which automatically makes alphanumeric combinations look better. For instance, it knows how to tackle postcodes and band names like U2 by changing them into mid caps so they fit well into text. As its design evolved, Actium's sturdy nature remained but became even more subtle.

Human After All

In the mid-to-late nineties, Daft Punk performed live without costumes in many places including the United States. In particular, a rare bootlegged video featuring the duo in Wisconsin matches the verified identity of Thomas Bangalter. Less clearly seen, Guy-Manuel de Homem-Christo is to Bangalter's right and is mostly cut off from the camera. Comparing the artwork packaging of *Homework* to the video footage, one can verify that the album's liner note photo was taken during this event. TEXT **WIKIPEDIA**, IMAGE **FLICKR**

In the fall of 1997 they did their Daftendirektour to promote *Homework* in several cities throughout the world. For this tour Daft Punk notably opted to utilize their home studio equipment for the live stage instead of creating a more conventional DJ set. As Bangalter stated, "Everything was synched up — the drum machines, the bass lines. The sequencer was just sending out the tempos and controlling the beats and bars. On top of this structure we built all these layers of samples and various parts that we could bring in whenever we wanted to." Also of note is the November 8 performance in Birmingham (UK) from which came the recording of *Alive 1997*.

At the start of 2006, Daft Punk announced plans for a number of special summer shows. On April 29, Daft Punk performed at the Coachella Valley Music and Arts Festival where they received a jubilant reception for

their first US performance since 1997. Bangalter has been reported as saying that there will be a DVD of their live set. In an interview with the Miami Herald de Homem-Christo stated that Daft Punk would conduct more performances in the future. The band later specified a date for a live show at Bercy, Paris for June 2007. Also reported are dates at the Rock Ness Festival and Wireless Festival in June. Daft Punk also announced a world tour (excluding Asia) called *Alive 2007*.

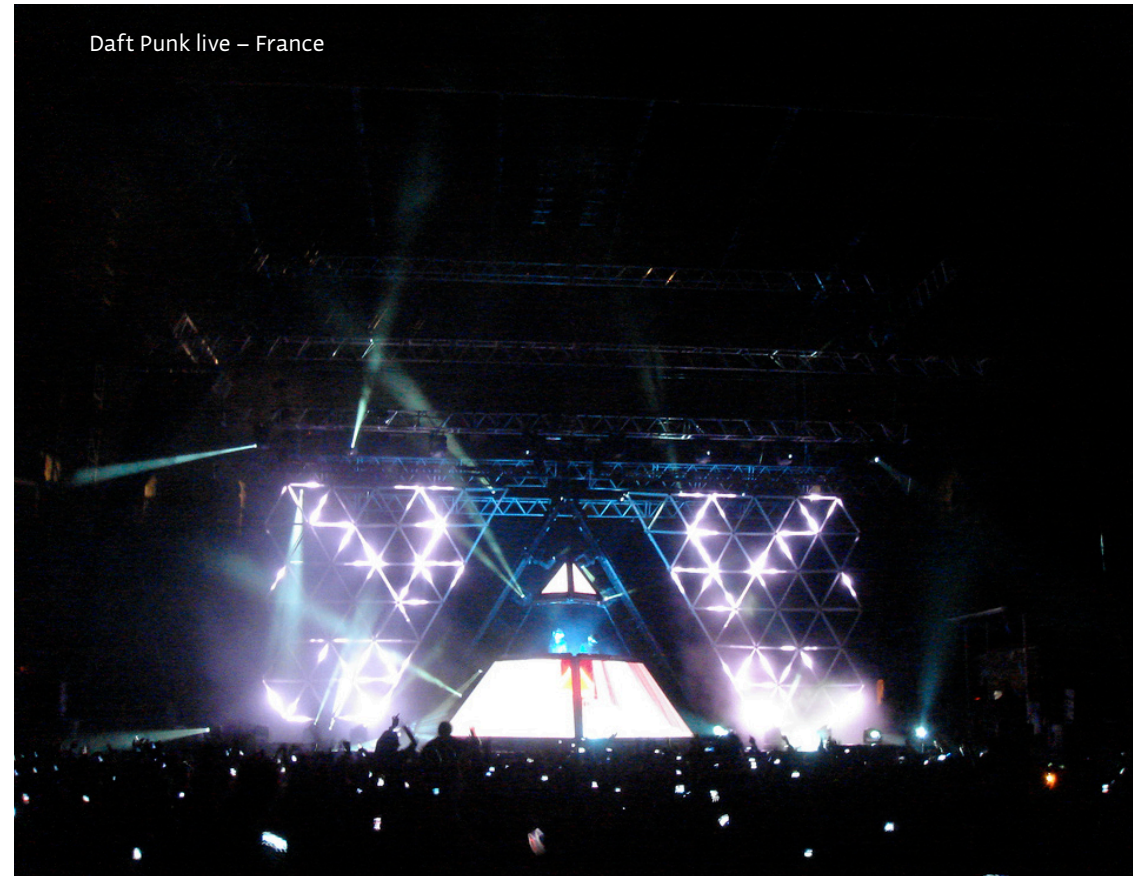

On June 10, 2007 Daft Punk played at the Rock Ness Festival as the headline act in the 10,000 capacity Clash tent. The show was delayed, but the crowd gave the duo a jubilant welcome when they appeared. Due to popularity, part of the tent was removed to allow thousands of people outside to see the show. On June 16, 2007 Daft Punk successfully headlined the third day of the O2 Wireless

Festival to positive reaction and reviews. The Times described the set as a "memorable sensory spectacle, both dazzling and deafening" and ThisisLondon declared it "an almost faultless set of relentless electro euphoria". Their live set was preceded by a showing of the trailer for the film Daft Punk's *Electroma*. Subsequent reports stated that the Daft Punk appearance was the highlight of the festival. NME expressed that the performance was "a robotic spectacular", while Shoutmouth described the set as "typically triumphant". On July 12, 2007, the duo played at Traffic Torino Free Festival in Parco della Pellerina. Due to popularity, part of the tent was removed.

Visual components

Daft Punk are noted for their use of visual components associated with their musical productions. The music videos for their singles from *Homework* featured memorable characters and placed emphasis on storytelling instead of musical performance. Daft Punk premiered their first directed film *Electroma* at the Cannes Film Festival sidebar Director's Fortnight. The film does not include their own music, which is a first for the duo considering their previous DVD and film releases. Midnight screenings of the film were shown in Paris theaters starting from the end of March 2007. Initial public comments have since been positive. The album *Discov-*

Daft Punk live – France

Η επιχείρηση προκειμένου να λειτουργήσει αποτελεσματικά χωρίζεται σε διάφορα τμήματα ανάλογα με τα κατάλληλα κριτήρια που ομαδοποιούν τις λειτουργίες και τις δραστηριότητες της ή που επιτυγχάνουν την καλύτερη δυνατή οργάνωση της. Μία πολύ συνηθισμένη, απλή αλλά και λειτουργική τμηματοποίηση είναι η αυτή κατά λειτουργίες:

Στο σύγχρονο επιχειρηματικό κόσμο με τους κολοσιάους πολυεθνικούς ομίλους και τις εκατοντάδες θυγατρικές, με τις συνεχείς εξαγορές και συγχωνεύσεις οι δομές γίνονται πολύ πιο σύνθετες και πολύπλοκες.

Ανυπομονώ να λάβω νέα πίσω από σας.

Subject: proposal

Birmingham, 28 July 2007

Dear Mr. Gardener,

A consultant is a professional who provides advice in a particular area of expertise such as the environment, technology, law, human resources, marketing, public affairs, communication, engineering or waste management.

The difference between a consultant and a 'normal' expert is that the consultant is employed with his client, but instead is in business for himself or herself, usually with multiple and changing clients. Thus, his clients benefit from levels of expertise than would be feasible for them to retain in-house. Speciality is needed comparatively rarely. It is generally accepted that the incentive to hire consultants as a check to the Principal-Agent problem is

...nt provides expertise to clients who require a particular type of service for a specific period of time, thus providing an economic benefit to the client. In other situations, companies implementing a major project may need additional

Ein U-Boot ist ein boot, das für die unterwasserfahrt gebaut wurde. Moderne große U-Boote, die eine masse von bis zu 26.000 tonnen haben können, werden auch U-Schiffe genannt. 1850 ließ der bayerische Artillerie-Unteroffizier Wilhelm Bauer das erste in Deutschland gebaute U-Boot, den sogenannten *Brandtaucher*, zu Wasser. Für die fahrt über wasser können im prinzip alle antriebe verwendet werden, die für schiffe in frage kommen. Gewöhnliche schiffsaggregate (dieselmotoren, gasturbinen) sind verbrennungsmotoren und benötigen große mengen sauerstoff für den verbrennungsvorgang, der bei überwasserfahrt in der luft zur verfügung steht. Grundsätzlich gilt, dass ein U-Boot um so schwerer zu lokalisieren ist, je kleiner und leiser es ist. Dieselelektrisch betriebene U-Boote haben deswegen im getauchten zustand oft vorteile gegenüber den wesentlich größeren atom-U-Booten. Der

Brød er ein type attåtmat laga av deig som er blitt steikt eller damp. Det finst ei rekke ulike brødslag frå heile verda. Dei kan etast varme som kalde, vera ferskvaraes som varer ein dag eller tola langvarig lagring. Ein kan laga brød av så lite som mjøl og vatn, men salt høyrer òg som regel med, og andre væsker kan brukast. Ein kan bruka mjøl frå ein type korn eller fleire. Kveite er eit sær s vanleg kornslag til å laga brød av, ettersom det har eit høgt gluteninnhald som gjer at det lett heng saman. Brød kan òg lagast av til dømes rug eller mais som einaste kornslag. Frø, nøtter eller krydder kan brukast for å setja smak på brødet. Feittstoff, egg og honning er andre ting ein kan ha i brøddeigen. Mange brød hever ved hjelp av eit stoff som utvikler gass i brødet, kan henda gjær,

Dators ir iekārta, kas apstrādā datus pēc iepriekš definētas procedūras. Datori ir konstruēti no komponentiem, kas veic vienkāršas, iepriekš noteiktas darbības. Šo komponentu savstarpējā saziņa ļauj datoram veikt informācijas apstrādes procesus. Pareizi sakonfigurēts (ieprogrammēts) dators spēj risināt noteiktas problēmas, kā arī būt lielākas sistēmas sastāvdaļa. Pareizi sakonfigurētām datoram padodot ievaddatus, programma tos apstrādā, un dators spēj atrisināt problēmu vai prognozēt sistēmas uzvedību. Tiek pēģināts iespējams izmantot datorikā bioloģiskās DNS. Pirmie datori bija tīri mehāniski. 1930-tajos gados telekomunikāciju industrijā parādījās releji, bet 1940-tajos gados jau tika uzbūvēti pirmie tīri elektroniskie datori izmantojot radiolampas. 1950-tajos un 1960-tajos gados tās tika aizstātas ar tranzistoriem, bet 1960-to gadu beigās un 1970-gado sākumā parādījās pirmās mikroshēmas.

French

Le pain est un aliment de base dans de nombreuses sociétés humaines. Il est fabriqué à partir de farine, de levure ou levain, de sel et d'eau. La pâte du pain est soumise à un gonflement dû à la fermentation, c'est ce qui caractérise le pain par rapport à la galette. La farine provient principalement de céréales panifiables: blé et seigle. On peut y adjoindre, en quantité modérée des farines d'autres provenances: autres céréales (orge, maïs), châtaigne, noix. De la pâte à pain sans levain aurait été oubliée, se serait « gâtée », mais aurait tout de même été cuite, permettant la découverte du pain avec levain. C'est en Égypte qu'on a retrouvé les plus anciennes représentations de pain. La fabrication d'un bon est un art complexe. De

Brauð er mikilvæg grunnfæða sem búið er til með því að baka, gufusjóða eða steikja brauðdeig. Deigið er gert úr mjöli og vatni, en salti er yfirleitt bætt við auk lyftiefnis eins og lyftidufti eða geri. Brauð inniheldur auk þess oft krydd og heil korn. Kafbátur er bátur sem er byggður þannig að hann getur farið í kaf og siglt í kafi. Kafbátar eru nú notaðir af öllum helstu flotadeildum heims og við rannsóknir neðansjávar. Kjarnorkunúnir kafbátar geta dvalið lengi neðansjávar. Ómannaðir rannsóknarkafbátar geta kafað á meira

Greek

Το υποβρύχιο είναι είδος σκάφους που έχει τη δυνατότητα να κινείται επί και υπό την επιφάνεια της θάλασσας. Προσπερνώντας τις διάφορες απόπειρες, από την αρχαιότητα, κατασκευής υποβρυχίων που όμως δεν τελεσφόρησαν λόγω τεχνικής ανεπάρκειας, τα πρώτα υποβρύχια κατασκευάστηκαν τον 17ο και τον 18ο αιώνα και έμοιαζαν περισσότερο με μεταλλικούς κώδωνες που φιλοξενούσαν συνήθως ένα άτομο και στήριζονταν για την κίνησή τους στη μύκη του δύναμη. Σήμερα τα υποβρύχια χρησιμοποιούνται κυρίως για στρατιωτικούς και ερευνητικούς σκοπούς αλλά και για αναψυχή καλούμενα συνήθως βαθυσκάφη. Στις 7 Σεπτεμβρίου 1776, στη διάρκεια του πολέμου της ανεξαρτησίας των ΗΠΑ, ο λοχίας Έζρα Λι επιβιβόντας στο υποβρύχιο Turtle (θάλασσα χελώνα) επιχείρησε ανεπιτυχώς να βυθίσει το βρετανικό πολεμικό πλοίο HMS Eagle που συμμετείχε στον αποκλεισμό της Νέας Υόρκης. Το "turtle" έμοιαζε πράγματι με δύο

English

A submarine is a watercraft that can operate underwater. Civilian submarines and submersibles are used for scientific work at depths too great for human divers. In 1995 the Royal Norwegian Navy became the first navy in the world to appoint a female submarine captain. In 1998, the Royal Australian Navy (RAN) became the second navy to allow women to serve on combat submarines. Canada and Spain followed in permitting women to serve on military submarines with seamen. The usual reasons for barring women that are given are lack of privacy and "hot bunking" or "hot racking", a common practice on submarines where three sailors share two bunks on a rotating basis to save space. The US Navy, which permits women to serve

Dutch

Een onderzeeër, of duikboot, is een vaartuig dat onder water kan varen. Vanwege deze mogelijkheid is hij in eerste instantie onzichtbaar voor mensen die aan de oppervlakte varen. Militaire onderzeeboten zijn vaak lastig op te sporen vanwege hun missie: ze dienen zich verborgen te houden totdat de opdracht komt om tot de aanval over te gaan. Een onderzeeboot die aan de oppervlakte of nog heel dicht daaronder vaart is op de radar zichtbaar en op geringe diepte ook nog met het oog, vooral vanuit de lucht. Van Alexander de Grote gaat het verhaal dat hij (ruim drie eeuwen voor onze jaartelling) al afdaalde in een duikerklok naar de bodem van de zee. Het eerste vaartuig dat werkelijk onder water voortbewoog is vermoedelijk ontworpen en gebouwd door de Nederlandse uitvinder Cornelis Drebbel. Tussen 1620 en 1624 nam Drebbel proefnemingen met een onderzeeboot op de Thames. Voortbewogen door enkele door enkele roeiers zou dit vaartuig

Czech

Chléb patří k základním potravinám připravovaným pečením, pařením, nebo smažením těsta sestávajícího minimálně z mouky a vody. Ve většině případů je nutná jedlá sůl a volitelně i kvasnice. Některé druhy chleba též obsahují koření a zrna. Zrna se též používají na dekoracní účel. Chléb je populární potravina v západní společnosti. Často se vyrábí z těsta ze pšeničné mouky, které je kultivováno droždím, umožňujícím kynutí cesta a nakonec upečeno v peci. Pro svůj vysoký obsah lepku, pšenice je nejčastější zrno používané na přípravu chleba, ale chléb je též vyráběn z mouky žita, ječmenu, kukuřice, a ovsu, obvykle ale ne vždy v kombinaci s pšeničnou moukou. Kvašení je proces přidávání plynu do těsta před pečením na dosažení
